

LOCATIONS CLOSE TO THE WORK

UO Group operates across the Gulf Coast and Southeast, with offices and fabrication shops positioned near the plants we serve. When a coil fails, help is regional, not a shipment from three states away.

Our Locations:

- 📍 Moss Point, MS.
- 📍 New Orleans, LA.
- 📍 Beaumont, TX.
- 📍 Houston, TX.

National Board and ASME certified for pressure retaining work, in the shop and in the field.

- ✓ ASME "U"
- ✓ ASME "R"
- ✓ ASME "S"

SCHEDULE A SYSTEM ASSESSMENT

Most coil failures start upstream, with a failed trap or a venting problem. A UO Group walkdown finds them before they cost you a coil or a production day.

INDUSTRIAL COIL SALES AND SERVICE

TAILORED PULP & PAPER APPLICATIONS

U.O. Group designs complete, prepped coil packages for critical mill systems:

✓ Process Air Drying

High-velocity, high-temperature coils for uniform paper web drying.

✓ Boiler Air Preheaters

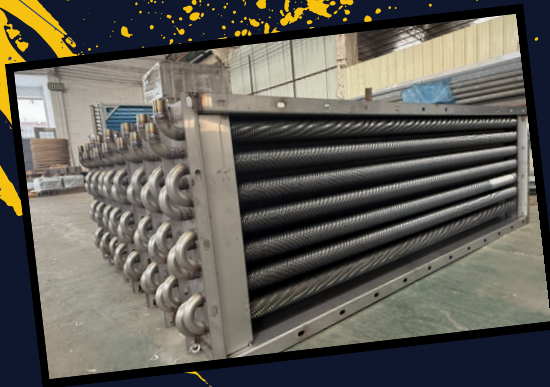

Recover exhaust and steam energy to boost boiler efficiency.

✓ Waste Heat Recovery

Heavy-duty coils that warm incoming air and balance mill exhaust.

✓ Make-Up Air & Building Heat

Heavy-duty coils that warm incoming air and balance mill exhaust.

SALES OVERVIEW

UO Group supplies industrial heat transfer coils as a reliability outcome, not a part in a box. We carry two engineered lines, so the coil matches the service: Armstrong International for critical, high-corrosion, code-stamped duty, and Advanced Coil Technology for value-priced and reverse-engineered replacements.

Our crews are already on-site running steam, tracing, and turnaround work across the Gulf Coast and Southeast. We field-measure, supply the right line, install it during your outage window, and fix the trapping and venting that caused the failure. One accountable partner, working on your schedule.

That is the difference. A product-only competitor ships a coil and leaves. UO Group stands behind the coil and the system around it, so the replacement doesn't become the next failure.

We don't just ship a coil. We fix why it failed.

SERVICE OVERVIEW

A coil is only as reliable as the steam system feeding it. UO Group self-performs the field work that keeps heat transfer equipment running, so the same team that supplies your coil stands behind its performance in service. That is what separates us from a supplier who ships a part and moves on.

Our coil and steam reliability services include:

- ✓ **Field measurement and reverse engineering** — on-site measurement and drop-in replacements, even when the original vendor or drawings are gone.
- ✓ **Coil replacement during turnarounds** — installed in your outage window, on your timeline.
- ✓ **Steam trap and vent audits** — we find and fix the trapping failures that shorten coil life.
- ✓ **Steam tracing and system repair** — we service the piping and steam distribution around the coil, not just the coil.
- ✓ **Turnaround and shutdown support** — self-performed mechanical scope across the Gulf Coast and Southeast.
